LSE	Minimum possible setpoint value
HC	Heat/Cool mode, H:heat mode, C:cool mode
ONT	Regulator protective devices:If set to “1” with OFT at “0”,the regulator is always off, while at OFT>0,it functions always in duty cycle mode.
OFT	Regulator in disabled state time in the event of a faulty poobe.If set to “1” with ONT at “0”, the regulator is always off,while at ONT>0,it functions always in duty cycle mode.
DON	Delay time in activating the regulator relay after switch-on of instrument.
DOF	Delay after switch off.The indicated time must elapse between switch-off of the regulator relay and the successive switch-on.
DBI	Delay between switch-ons.The indicated time must elapse between two successive switch-ons of the regulator.
ODO	Delay time in activating the outputs after switch-on of the instrument or after a power failure
POS	Positive or negative temperature value added to the value
CF	Selection of $^{\circ}$ C or $^{\circ}$ F to view the temperature read by the probe.
END	End defrost temperature
